Machine labelling: three years of attempts before the first deployment (marker at the outcome)
dives captured
laser dot
laser calibration
head/tail
species
guess-correction script
2D Gaussian fit on the brightness channel
CLI neural detector (demo checkpoint)
brightest spot (saturated-pixel blob on the laser line)
neural-detector pre-fill in Label Studio
neural detector in laser calibration
Gaussian-mixture detector
Depth Anything detector
RAW U-Net detector (run3) pre-fill, then auto-accept
classical slate detection (CLI)
slate pose predictor pre-fill
checkerboard laser calibration automated (lab)
size constancy, SAM 3 (this paper)
SAM 3.1 pre-fill
Fishial mask + mask axis (mobile app)
Fishial mask pre-fill in Label Studio
SAM 3 pre-fill (swapped for SAM 3.1 next day)
BioCLIP 2.5 + trained head
