

	Laser dot	Calibration (per dive)	Snout and fork	Species
for a person	clicks the dot 13 s per label	clicks 6-8 slate points 61 s per frame; tape pattern chosen so people can click it	clicks snout and fork 15 s per label	names the species 12 s per label
for a machine	detector; skips review when on the dive's own laser line	SAM 3.1 board mask, an object of unknown size; frames found by a classifier	SAM 3.1 fish mask at the dot; head and tail from the mask	BioCLIP 2.5 with a trained head
what the machine needs from the system	a colour it sees: green missed 3× as often as red	slate shot near and far: ≥ 2× apparent size	≥ 2 frames per fish: 71% → 85% within 10%	nothing found
